

TILE & FLOOR CARE FLOORFIX

Tile & Floor Care FloorFix is a uniquely formulated fill and repair compound for hard concrete floors. FloorFix is designed to withstand heavy traffic such as vehicles, trolleys, forklifts etc. Even though FloorFix is designed interior and exterior industrial applications, it is easy to use and therefore suitable for DIY use. After full cure the compound is generally stronger than the original concrete that has been repaired. FloorFix's quick drying formula reduces down time and puts your floor back in service quickly. Floor Fix is premeasured for general use. We advise you measure full batches per application, but if small quantities are required the mixture is 5 parts powder to 1 part resin additive. In some cases differing consistencies are necessary (as in a liquid mix or a dry mix) to suit varying tasks. FloorFix will not shrink whilst drying.

Available in 2.5Kg only.

Coverage:

3Kg pack of FloorFix will make 1.8L of fill compound

1L of compound will cover 1m² at 1mm thick.

1L of compound will cover 0.5m² at 2mm thick.
